Use the ResinPave system for:

- Footpaths
- Park trails
- Resort paving
- Golf cart paths
- Driveways
- Parking lots
- Riding trails
- Bike trails
- Camping areas
- Garden paths
- Waterside paths
- Recreation areas
- Courtyards

Go Green and Cool for Natural Looking, Cost-Effective Paths and Trails

Picture the paths of a centuries-old park, bike trails along a river, even the parking lot of a favorite campground. Chances are you are not seeing asphalt or concrete in your mind’s eye. Where naturally beautiful surfaces are the desired outcome, the most eye-pleasing results are those that look as if they were designed by Nature herself.

Midwest’s versatile ResinPave natural paving system delivers more than aesthetics. In addition to curb appeal, it produces heat-reflective, cool surfaces with superior strength, durability, and environmental properties that can translate to LEED credits for your project. You get the performance you want at a lower cost per square foot than asphalt or concrete, without causing any harm to the environment.

The ResinPave® system at a glance

- Creates a decorative, durable, all-weather pavement
- Produces heat-reflective surfaces that remain cool
- Meets ADA guidelines for accessibility
- Installs with ease and is simple to maintain
- Will not harm vegetation or wildlife
- Can be used to repair deteriorated asphalt

More reasons to choose Midwest

Midwest is the world leader in environmentally sound dust control, erosion control, and soil stabilization technology. We bring our customers more solutions, documentation and support than any other manufacturer. On a daily basis, we challenge ourselves to become even more accessible problem solvers so we can set a new industry standard for proactive and responsive service. Pushing the envelope is part of our corporate DNA, and we strive, always, to develop cutting-edge processes, products and services; stay on top of the learning curve, and educate our customers for our mutual success.

If the shoe doesn’t fit . . .

One size fits all does not always make for a good fit; unique problems require unique solutions. Midwest is a particle-control pioneer, not a me-too company. Our product development begins with a challenge and ends when we produce a solution that proves its worth in the field. Off the shelf is fine when it works, but when it does not, Midwest has the capability and tenacity to customize a formula for your specific needs.
The ResinPave components – GreenPave Base™ and GreenPave Chip™

Based on Midwest’s GreenPave™ family of products, ResinPave is the original natural paving system, introduced more than 20 years ago. It enables you to use the aggregate of your choice – or in-place soils where they are the only option – to form a natural-looking surface which can also serve as the base for a more decorative chip-sealed finish.

GreenPave Base, a proprietary polymer-enhanced, resin-based organic emulsion, is combined with an aggregate to create a structure that maximizes strength and extends the useful life of a surface. GreenPave Base:
- Increases loading capacity (CBR)
- Reduces harmful moisture penetration
- Resists rain, heat, freezing and thawing
- Delivers strength and aesthetics at a reasonable cost

GreenPave Chip, a custom-formulated chip binder, allows a decorative, functional chip to be added into pavement, resulting in a natural-looking visually-pleasing, architecturally-unique surface. It can be installed over GreenPave Base or asphalt, eliminating or dramatically reducing pavement removal costs. GreenPave Chip:
- Provides a wide range of color, aggregate and pattern choices
- Affords architectural flexibility in building, renovating or enhancing luxury homes and resorts
- Creates or restores a smooth surface where there has been deterioration
- Is faster, easier and less labor intensive to install compared to other decorative paving surfaces

GreenPave surfaces have low lifecycle costs and require minimal maintenance to preserve both strength and appearance.

Installation – getting the job done right

Midwest binds existing or locally sourced aggregate which can be applied by hand or by a paving machine. The finished surface, available for use after a short curing process, can be striped and painted for parking lots or other applications.

Midwest has decades of experience in design, soils testing, engineering, installation and post-installation performance testing. Our skilled engineers and field staff are on hand from beginning to end to ensure that your newly paved surfaces will perform optimally.
